

Pillow Laboratory

Our guests spend 6 to 10 hours per day resting on a pillow. As a primary point of contact, we endeavoured to improve the hygiene standards of our pillows through scientific research into material choices and cleaning processes.

With this goal in mind, One Farrer Hotel developed the Pillow Laboratory. Slated to launch in 2021, it is equipped with an industry-leading Ultraviolet-C (UVC) Chamber for deep disinfection of guest room pillows between use - a safe and effective method that removes all pathogens, natural microbiota, molds, and yeasts.

What began as a labour of necessity to ensure the health and safety of our guests soon also unveiled opportunities to enhance comfort and quality of sleep. As such, we have specially curated menu of pillows to suit the most exacting preferences in firmness and sleeping posture. Try our selection during your stay and speak to our staff should you like to make a purchase.

Pillow Menu

The Pillow Laboratory presents a selection of hypoallergenic pillows that do not compromise on comfort.

Exceed Down Hotel Collection Pillow

Available as standard in all guestrooms, the Exceed Down pillow is perfect for good air retaining abilities and heat preservation. Filled with an artificial feather structure, one will feel the limitless comfort of down feathers, while staying away from allergies. The pillow is fully treated for antibacterial protection and effective in controlling dust mites and fungus growth.

900g - \$39.90

1,200g - \$49.90

Bamboo Charcoal Pillow (Regular/Memory Contour)

Offering the combined benefits of comfort and hygiene, activated bamboo charcoal fibre is an environmentally functional material which has excellent absorption properties. The material is hypoallergenic, naturally dust mite resistant and effective against odours. Available in regular or memory contour for added support and firmness.

900g - \$49.90

1,100g - \$59.90

Memory Contour - \$59.90

Brace Support Pillow

This uniquely shaped pillow is made from dermatological grade elastomer polymers (silicone) that is moulded into a unique grid-like structure giving one unparalleled support, while absorbing pressure off the head and neck. The vented grid design allows air to flow freely throughout the pillow, giving one a cooling and comfortable night's sleep. Compared to fibre pillows, it is also easier to clean.
